

Website Update Workflow Reference

Run these quick commands whenever you update your local files to deploy to **kerrylearned.com**.

1. Open terminal & go to project

```
cd ~/Programming/Website
```

2. Stage all local file changes

```
git add .
```

3. Commit with a message

```
git commit -m "Brief description of changes"
```

4. Push changes to GitHub

```
git push
```

5. Automatic Live Deployment

Cloudflare instantly detects the push and updates your live site within 30–60 seconds.
